Preparing For Your Home Computer

You **must** have internet service in the house. If you do not have internet service, go to www.EveryOneOn.org and apply for low cost internet service through a special Comcast program. To qualify, the student has to be on a school lunch program or family has to meet certain income requirements. This process can take several weeks.

Have a computer table or desk located where you want the computer. The Internet connection Modem/Router should be located nearby the computer desk/table. This will allow the computer to be hardwired directly to your router if it is next to the computer

If your modem/router is not near the computer, it can still be connected with a **Wi-fi** adapter. Desktop computers do not come standard with built in Wi-Fi so **we must know in advance** so we can pre-install a **Wi-Fi adapter**.

When both the desk and the internet service are in your house,
